ABOUT ME

I'm Alice, a Junior Front-End Developer and Ui/UX Designer based in Vancouver. I graduated from the British Columbia Institute of Technology with a major in New Media Design and Web Development. I am proficient in front-end languages such as HTML, CSS/SASS, JavaScript, as well as design software such as Photoshop, Illustrator and Figma. At the same time, I am also learning frameworks such as React.js, and some back-end development languages, and databases.

I'm originally from Taiwan and came to Vancouver to study independently. I can speak English and Mandarin. After work, I like to travel to relax my body and mind, and get in touch with different natural environments, humanities and customs, which can also help me to realize new concepts of life.

As I continue to grow in my career, I am excited to take on new challenges and collaborate with other professionals in the field. I am passionate about creating designs that not only look great but also provide a seamless user experience. By combining my technical skills with my love for design, I aim to develop innovative solutions that make a positive impact on users' lives. I look forward to connecting with like-minded individuals and contributing to exciting projects that push the boundaries of web development and design.

EDUCATION

Chia Hwa Senior High School, Chiayi, Taiwan

--Graduated Jun 2018

VGC International College, Vancouver, BC

--Graduated Aug 2022

British Columbia Institute of Technology,
Vancouver, BC

-- Currently Enrolled
